

# STABILISED CHLORINE TABLETS

## DESCRIPTION

Pool Pride Stabilised Chlorine Tablets are a longer lasting 200g tablet that leaves no residues. It is a white crystalline powder in tablet form with a chlorine odour. This is soluble in water and forms a slightly acidic solution. It is a highly reactive oxidising and chlorinating agent.

## USES

One tablet will last one week in a 36,000L pool. The tablet is usually placed in a skimmer, lint trap or floater.

Pools Size (Litre)	No of Tablets
36,000	1
72,000	2
108,000	3

## PRECAUTIONS FOR USE

As this product is slightly hygroscopic, that is it absorbs moisture from the air, it must be stored in a cool, dark, dry storage room. This must not be stored with acids, combustible materials, amines and reducing agents.

## NOTE

The Cyanuric Acid (stabiliser content) in the tablet protects the chlorine from degrading at a rapid rate from UV radiation from the sun and heat from the pool. However, if the Cyanuric Acid levels exceed 30 ppm, the chlorine becomes inhibited by the Cyanuric Acid and does not sanitise the pool. The pool then turns a green slimy colour from algal growth. Therefore this is not a suitable product to shock dose the pool. Chlorine products without the stabiliser are suitable - such as Pool Pride Chlorine Granules or Pills.

## PACK SIZES

4x1.8Kg ctn      2x3.6Kg ctn

Refer to Material Safety Data Sheet for handling and first aid instructions.
