

# pH BUFFER

## DESCRIPTION

Pool Pride pH Buffer prevents rapid changes in the overall pH level of the swimming pool or spa pool.

## USES

Pool Pride pH Buffer is also known as Sodium Bicarbonate or Baking Soda.

## DIRECTIONS FOR USE

### For Beginning of Season and/or New Pool Requirements:

Test the Total Alkalinity of the pool - ideal pH Buffer levels should be as follows:

|  |                      |
|--|----------------------|
| Pool treated with Stabilised Chlorine Tablets: | between 150 - 200ppm |
| Pools treated with Chlorine Granules:          | between 120 - 150ppm |

If the pool is below the required level:

To raise the pH Buffer level by 10ppm -

1. Apply 170g of pH Buffer per 10,000L of pool water.
2. Distribute directly around the perimeter of the pool.
3. Run the filter for 1 hour per 4000L of pool water.
4. If required level is not achieved repeat procedure.

It is better to raise the pH Buffer level gradually rather than completing the operation in one dose.

If pH Buffer level is too high then it is necessary to dilute pool water. To do this, drain off between 15 - 20% of pool water and refill with fresh water.

### For Monthly Requirements:

Test the Total Alkalinity of the pool - ideal pH Buffer levels should be as follows:

|  |                      |
|--|----------------------|
| Pool treated with Stabilised Chlorine Tablets: | between 150 - 200ppm |
| Pools treated with Chlorine Granules:          | between 120 - 150ppm |

If the pool is below the required level:

To raise the pH Buffer level by 10ppm -

5. Apply 170g of pH Buffer per 10,000L of pool water.
6. Distribute directly around the perimeter of the pool.
7. Run the filter for 1 hour per 4000L of pool water.
8. If required level is not achieved repeat procedure.

## PACK SIZES

4x2 Kg

Refer to Material Safety Data Sheet for handling and first aid instructions.
